

## Frequently Asked Questions

### What causes water staining?

Water staining occurs when water is left to evaporate on a surface. The minerals in our water supply (and rain water) are left behind and etch into the surface. Glass is particularly susceptible water staining.

### What makes Waterspot better than other products I've tried?

Our environmentally friendly product is non-corrosive, non-flammable, has no phosphates, no bleach, no solvents, no detergent, and most importantly no acids (so no need to wear gloves). The unique easy to apply formula is designed to draw out mineral deposits from within the glass. **WATERSPOT** is also a brilliant polisher of metals and can be used safely on a wide variety of surfaces. **WATERSPOT** to be the most effective and versatile product of its kind on the Australian and New Zealand Market.

### Will Staining returned once restored?

If you simply use a proven maintenance paste (Like **WATERSPOT**) on a regular basis, your glass surface will NEVER STAIN UP AGAIN. That simple
